*Russian propaganda tools:  
from Cold War tactics to XXI century realities* / 297

Cătălina NASTASIU

*Strategic narratives in contemporary warfare:  
conceptualization, typologies, and objectives* / 320

## Introduction

The landscape of public communication has undergone major changes, driven by rapid technological advancements and the proliferation of social media platforms. The evolution of these digital environments has reshaped the dynamics of communication, influencing political discourse, societal perceptions, and affecting the fundamentals of democratic engagement. These platforms, once perceived as tools for connecting individuals, have emerged as main channels for disseminating information, disinformation, strategic narratives and official messages.

This volume builds upon the works presented by young scholars and seasoned researchers at the 3rd *International Graduate Conference in Communication* which was held on June 15-16, 2023, at SNSPA, in Bucharest, Romania. The volume addresses the broader media landscape, highlighting the challenges and opportunities posed by the digital transformation. Social media platforms have provided new opportunities for engagement, allowing individuals to create and share content more easily than ever before. However, this shift has also led to the erosion of traditional gatekeeping functions within the media. Journalists and media organizations now find themselves navigating a fragmented and decentralized information environment, where the lines between fact and fiction are often blurred. As such, the volume examines the implications of this transformation for the practice of journalism, exploring the risks of platformization and the loss of editorial control that comes with reliance on digital giants for content distribution.

Additionally, the volume reflects on the evolution of the media landscape, from traditional channels such as newspapers and television to the digital transformation marked by social media. This shift has not only altered the ways in which information is disseminated but has also redefined the role of communication for intelligence agencies and public institutions. The increasing transparency and engagement of such institutions, particularly in Romania, through social media communication represents a significant change in how state institutions communicate with the public. This development reflects broader trends in public communication, where government institutions strive to build trust and communicate directly with citizens in the digital age. The volume also highlights the importance of understanding how

these institutions can navigate the complexities of digital communication to enhance their role in safeguarding national security.

Furthermore, by focusing on the specific emotional triggers and keywords used in disinformation, it provides a framework for understanding how emotional appeals are crafted to resonate with public fears, desires, and biases. The volume further investigates the evolution of the Kremlin's propaganda apparatus, exploring how traditional Cold War-era techniques such as reflexive control and active measures have been repurposed and enhanced for the digital age. The transformation of these tactics, from Soviet propaganda to modern disinformation campaigns targeting Western democracies, highlights the growing sophistication and scale of digital influence operations.

In summary, this volume explores the dynamic and complex interplay between digital tools and public communication in the current media landscape. Through a series of case studies and theoretical analyses, this volume explores the challenges of the digital environment from multiple perspectives: the day-to-day user experience, the evolving role of the media, the broader implications of major state actors and the carrying out efficient strategies in public communication.
